# SAVE THE EXPENSE OF REPLACING COSTLY HEADLIGHT COMPONENTS!

## AFTER

After undergoing Wynn's Headlight

Restorer 2-step process, headlight facings look new again and, more importantly, perform like new.

## BEFORE

Over time road dirt, grime and

contaminants are trapped in the pores of your plastic headlight facings, causing an appearance and safety problem.

Did you know your headlights breathe? Well, sort of. The clear plastic facings get hot when your lights are on, and then the plastic expands. As you drive, these heated facings pick up road dirt and grime so that, when the lights are switched off and the plastic cools and contracts, the surface of the facings trap dirt and contaminants — and no amount of cleaning or scrubbing will get them clean again.

After a while, your headlights become dull and discolored, which not only affects the visual appeal of your vehicle, but also diminishes the performance of the headlights. So the dirt that collects on your headlights becomes not only an appearance problem; but a safety concern as well.

Now, your car care professional can correct this problem and get your headlights sparkling like new—without having to buy new headlight components—with Wynn's *Headlight Restorer*.

With Wynn's *Headlight Restorer*, your car care professional puts your headlights through a two-step process. First, a unique abrasive removes road dirt and debris from the headlight facings without damaging the plastic surface. Next, a coating is applied that seals and protects the facings from further deterioration. Your headlights look like new again. And, more importantly, they perform like new.

Ask your car care professional about Wynn's *Headlight Restorer* today. Don't wait until it's too late.
