

PRODUCT SPECIFICATION

# WYNN'S BRAKE SERVICE KIT PART #10082

2-Part Brake Service Kit Contains:

- Ultra Disc Brake Caliper Lube (0.25 oz. pack)
  - For application to caliper slides after cleaning with Wynn's Brake & Parts Cleaner.
  - An environmentally friendly, non-melting, pure synthetic lubricant.
  - Formulated to prevent long bolt and sleeve seizing and galling.
  - Applications include: caliper pins, slides, sleeves, bushings and pistons.
  - Protects metal caliper components from rust and corrosion.
- Stop Squeak for Brakes (2 oz. bottle)
  - Quiets noisy brakes
  - Eliminates pad squeal
  - Fills voids and pits on pads
  - Stops customer comebacks for squeaky brakes

## WYNN'S BRAKE SERVICE KIT

Part #10082	12 x 2-part kit per case

# WYNN'S BRAKE SERVICE KIT

## The Problem

At some point following a brake service which included replacement of disc brake pads, there are often customer comebacks with complaints of disc brake squeak or squeal. The source of this generally high-pitched noise when the brakes are applied is vibration (resonance instability) of the brake components, specifically the rotors and pads. This does not negatively affect brake stopping performance but is annoying and causes customer dissatisfaction with the service. Sometimes cold weather combined with morning humidity (dew) can make the brake noise worse, and the noise may disappear when normal operating temperatures are reached. Often though, the noise continues under almost all driving conditions.

Dust on the brakes may also cause squeal and there are many brake cleaning products that can be used to remove dust and contaminants from the brakes. Again, dust may not be the cause of the brake noise, so another solution to brake cleaning is needed. Bottom line, a simple cure for this common customer complaint would be of great relief for the professional brake technician.

While performing brake services, technicians also use brake caliper lube to both lubricate and protect metal parts in the brake calipers. Having a high quality brake caliper lubricant that would take the worry out of the job and to have this product easily available for such use would also be of great comfort to the professional brake technician.

Brake services are one of the most commonly performed routine automotive maintenance services and having the proper products to prevent customer comebacks leads to satisfaction for both the customer and for the professional brake technician and shop.

## The Solution

Wynn's 2-part Brake Service Kit is the perfect answer to the search for high quality brake service products to increase the ease and effectiveness of brake maintenance services.

Wynn's Ultra Disc Brake Caliper Lube is an environmentally friendly fully synthetic lubricant designed to be applied to brake caliper pins, slides, sleeves, bushings and pistons. It is formulated to prevent long bolt and sleeve seizing and galling. This product not only functions as a lubricant to ensure smooth brake operation, but also protects brake system metallic components from rust and corrosion and assures long brake system component life. It is packaged in a 0.25 oz tube for easy one job application.

Wynn's Stop Squeak for Brakes is an alcohol-based product containing a solid frictional component. This product is designed to be applied to the brake pad prior to installation, covering the pad completely with a thin layer. The product will soak into the porous surface of the pad, and when the alcohol carrier evaporates, the solid frictional component will be left behind on the pad to fill gaps in the surface and ensure smooth and noise free brake application. Brake stopping distance is not affected, but brake squeak and squeal are prevented. This is the simple and easy to apply product for all brake pad replacements that will ensure noise free brake operation and satisfied customers.

Wynn's 2-part Brake Service Kit is the answer for professional service technicians looking for a way to increase the effectiveness of their brake services and produce more satisfied customers.
