

PRODUCT SPECIFICATION

WYNN'S® DIESELPRO™ DIESEL FUEL DETERGENT & LUBRICITY ADDITIVE

- A highly effective lubricity and detergent additive specifically for vehicles using Ultra Low Sulfur Diesel (ULSD) fuel
- Protects the fuel injection pump and injectors from low-lubricity diesel fuel
- Replaces the lubricity present naturally in higher sulfur, environmentally hazardous diesel fuel.
- Cleans diesel injectors and helps keep them clean
- Packaged in a dose control dispensing bottle to easily add 1 fl. oz. to each 20 gallons of diesel fuel
- Makes it easy to add the proper dose to each tank of fuel for maximum performance, engine cleanliness and wear protection

Wynn's DieselPro™ diesel Fuel Detergent & Lubricity Additive	
Part #A6301	12 x 16 fl. oz.

WYNN'S® DIESELPRO™ DIESEL FUEL DETERGENT & LUBRICITY ADDITIVE

The Problem

Beginning on September 1, 2006, the U.S. EPA (Environmental Protection Agency) mandated that all diesel fuel sold in the U.S. for on-highway consumption contain a maximum sulfur concentration of 15 ppm sulfur. All model year 2007 and newer diesel engines are designed and required to be operated on this Ultra-Low Sulfur Diesel (ULSD) fuel. The target of this sulfur reduction is to reduce emissions of sulfur dioxide (SO₂), oxides of nitrogen (NO_x) and particulate matter (PM) from newer diesel vehicles. These emissions are environmental hazards and must be minimized going forward.

There are beneficial diesel fuel components removed along with the sulfur when making ULSD. These components contribute to diesel fuel lubricity, which helps to lubricate and protect diesel injection pumps from premature wear. Lubricity is especially important to diesel fueled engines as opposed to gasoline fueled engines because of the extremely high operating pressures in diesel injection systems, where wear can be a serious problem. Recognizing this problem the industry has established a minimum lubricity standard for ULSD fuel. Unfortunately this standard is below the lubricity of the previous high sulfur fuel.

The challenge is to properly protect the environment from the hazards associated with high sulfur levels in diesel fuel, as mandated by the EPA, but not to compromise the performance and protection from wear of key components in today's modern diesel engines.

The Solution

Wynn's *DieselPro Diesel Fuel Detergent & Lubricity Additive* is the perfect solution for replacing the lubricity that was lost from diesel fuel by today's mandatory ULSD (Ultra-Low Sulfur Diesel) standard. In addition, this product also contains a detergent to maintain fuel system cleanliness to keep diesel engines operating at peak performance and efficiency. It is packaged in an easy to use dose control dispensing bottle to easily add the appropriate treat rate of 1 fl. oz. to each 20 gallons of diesel fuel.

When added to diesel fuel at the recommended dosage, this product is a highly effective lubricity and detergent additive specifically designed for today's vehicles using Ultra Low Sulfur Diesel (ULSD) fuel. The fuel injection pump and injectors will be protected from low-lubricity diesel fuel by replacing the lubricity present naturally in higher sulfur levels. In addition, this product cleans diesel injectors and keeps them clean, for maximum performance and fuel economy, so important in today's world of high diesel fuel prices.

Wynn's *DieselPro Diesel Fuel Detergent & Lubricity Additive* is the perfect solution for those diesel owners wanting to restore the lubricity no longer naturally present in today's ULSD fuel, while protecting the environment and also maintaining the performance and longevity of their diesel engines.

You can depend on Wynn's!
