

PRODUCT SPECIFICATION

WYNN'S® WYNNSHIELD™ RAIN REPELLING GLASS TREATMENT

- Highly effective, water-based rain repellent
- Forms an invisible barrier to water, dirt, road debris, snow and ice
- Improves visibility and glass clarity
- Spray-on/wipe off formula is quicker and easier to use than other rain repellents
- Completely compatible with plastic, metal and paint
- Ideal for all automotive glass:
 - Windshields
 - Side glass
 - Backlites
 - Mirrors

WYNN'S®

WYNNSHIELD™ RAIN REPELLING GLASS TREATMENT

The Problem

Automotive windshields, mirrors and other automotive glass surfaces are exposed to weather, dust, pollution and road debris. These compounds adhere to glass making windshields more difficult to see through. Rain itself will adhere, obstructing views and must be physically wiped away for clear vision.

Current windshield treatments on the market are laborious to apply; requiring cleaning, drying and buffing of the surface. In addition, acid content in these products can react with other automotive surfaces, requiring special care during application.

The abrasive environment on a windshield requires any windshield treatment to be re-applied occasionally to ensure full strength protection. The existing treatment's requirement of a laborious application process can discourage this from happening.

The Solution

Wynn's WynnShield Rain Repelling Glass Treatment is a water-based rain repellent that is applied easily to any glass surface, rendering that surface hydrophobic or water-repellent. The product creates an invisible barrier to water, dirt, ice and snow, allowing contaminants to run off or literally blow-away with the passing air stream while driving. Improved visibility during rain and improved glass clarity result.

Application to a clean windshield is as simple as spraying on and wiping clear. No drying, buffing or polishing is required. The surface is instantly treated and ready for exposure to rain and other contaminants. Multiple treatments are provided in each package to enable simple spray-on/wipe-off reapplication after a few months or when desired to maintain peak performance.

Other automotive finishes like plastic, metal and paint are unaffected by overspray of the product. No cleanup is necessary.
