Wynn's[®] Supreme +Plus+ Oil Change Kit

THE PROBLEM

At the heart of any engine is its lubrication system, essential to efficiency, performance and durability. Engine oil is exposed to internal engine heat, pressure and "blow-by" contamination. This affects the engine's performance and the life of the engine. Further taxing the engine lubrication system are external factors, such as severe driving conditions, increased driver neglect and extended / irregular oil change intervals.

When a regular oil change is performed, the only oil that is replaced is what will freely flow from the engine. Sludge, varnish and other deposits are left behind in the engine immediately contaminating the new oil. Why put your new oil into a dirty engine?

The additives contained in even the best engine oils are depleted with use, making the use of supplemental treatments a wise choice for the motorist wanting the most from their engine. There is a need for a proven engine oil supplement that will provide an extra level of protection to the basic formulation of today's quality motor oils.

THE SOLUTION

A Wynn's[®] Supreme +Plus+ Oil Change will provide the dual benefits of completely cleaning your engine, while providing the engine oil with proven supplements. A Supreme +Plus+ Oil Change Kit consists of two parts. Combined they offer the best oil change that you can obtain.

Wynn's Oil System Cleaner & Conditioner

- When added to the oil before an oil change it will remove the harmful deposits from the oil system and promote a complete drain of the used oil. It provides wear protection during the engine flush process while reducing the contamination of the new oil.

Wynn's Supreme +Plus+ Oil Treatment

- (U.S. Patent No. 4,557,841) is formulated with premium API SL / ILSAC GF-3 additive technology in addition to:
- DETERGENTS / DISPERSANTS to maintain engine cleanliness by preventing the accumulation of harmful deposits.
- OXIDATION INHIBITORS to retard oil thickening caused by high temperature operation and extended service intervals.
- FRICTION MODIFIERS to reduce friction and increase engine efficiency
- ANTI-WEAR ADDITIVES to prevent engine wear associated with start-up and severe driving conditions. It will also boost the anti-wear ability of the engine oil, which will deplete with use.
- RUST AND CORROSION INHIBITORS to neutralize acids formed by combustion by-products and protect engine surfaces from rust resulting from water in the oil due to condensation.
- Add new oil following each oil change or between oil changes to revitalize the engine oil.
