

PRODUCT SPECIFICATION SHEET

WYNN'S® ADVANCED FRICTION PROOFING® Oil Treatment

Formulated to:

- Reduce oil consumption and exhaust smoke.
- Improve compression and performance in worn engines.
- Reduce sludge and varnish for a cleaner engine.
- Restore oil pressure and viscosity.
- Reduce friction and wear for maximum engine life.

WYNN'S® Advanced Friction Proofing® Oil Treatment

THE PROBLEM

The efficient operation of any engine depends on an adequate and properly directed supply of lubricating oil. Motor oils do much more than lubricate and reduce friction. Various additives incorporated in motor oils, such as corrosion inhibitors, viscosity improvers and detergent/dispersants, provide extra engine protection. However, with time and use, motor oil breaks down and the additives deplete. The rate at which additive depletion and oil breakdown occur is affected by several factors. Extensive idling in traffic jams, frequent short trips, mechanical condition of the engine and neglected general maintenance can all speed up oil contamination and breakdown.

THE SOLUTION

Wynn's® Advanced Friction Proofing Oil Treatment replenishes these vital additives for extra engine protection and longer engine life:

- Anti-wear agents.
- Acid inhibitors.
- Corrosion fighters.
- Viscosity index improvers.
- Detergents / dispersants.

High quality additives are formulated and blended to:

- Reduce wear.
- Improve compression in worn engines.
- Fight oil consumption and engine smoking.
- Quiet engine clatter.
- Reduce sludge and varnish.
- Inhibit corrosion.
- Restore pressure and viscosity.
- Allow safe cold weather cranking.
