

PRODUCT SPECIFICATION SHEET

WYNN'S® FUEL SYSTEM Tune-Up Kit

Formulated to:

- Improve performance.
- Stop rough idle and hard starting.
- Clean away gum and varnish.
- Save fuel.
- Increase horsepower and fuel economy.
- Reduce emissions.

Removes performance robbing deposits on:

- Throttle plate and induction system ports and runners.
- Injectors and intake valves.
- Combustion chambers.

For use with Wynn's EnviroSpray®, Induction System Cleaning tools or EnviroPurge® apparatus.

WYNN'S® Fuel System Tune-Up Kit

THE PROBLEM

High-tech fuel systems require advanced maintenance solutions. Varnish buildup, corrosion and carbon deposits restrict the flow of air and fuel to your engine just when you need it the most, during start-up and acceleration. Today's lean-burn engines are much more sensitive to disruptions in air-fuel ratios than yesterday's engines.

As a vehicle accumulates more mileage, the induction and fuel system are likely to lose efficiency. Performance and drivability begin to suffer as gum, varnish and deposits build up in the fuel system. Rough idle and hard starting are common complaints.

A gradual loss of fuel economy is typically not noticed, but that doesn't mean it isn't happening. The engines of today typically use a sophisticated fuel injection system. They are more efficient and complex than ever before. A clean fuel delivery system has never been more necessary.

THE SOLUTION

Wynn's® Fuel System Tune-Up will unclog dirty injectors and fuel rails, clean and lubricate your air intake system and remove intake valve and combustion chamber deposits.

You will notice an increase in fuel economy and engine performance immediately.

Having your service facility perform a Wynn's Fuel System Tune-Up on your customer's dirty fuel system will:

- Clean fuel injectors and the fuel system
- Provide a smoother running engine, especially at idle
- Restore lost power
- Increase engine efficiency
- Reduce fuel octane requirements
- Improve your engine's intake air flow
- Reduce harmful exhaust pollution
- Project against rust and corrosion
- Lubricate air intake, throttle plate and condition the entire fuel system
